

The following list is an outline of the services to be performed on site

1	Mowing,trimming, and clean-up of turf areas an average of thirty-six (36) times per year
2	Mechanical edging of turf and bed areas as necessary to maintain neat, well defined edges.
3	Fertilization of shrubs and trees once per year as determined by soil and plant conditions.
4	Fertilization of turf areas twice per year. Spring fertilization will include a pre-emergent weed control agent. Fall fertilization will be formulated to promote off-season root growth.
5	Soil testing will be done if problems arise that cannot be readily identified by Puryear Farms management
6	Shrubs are to be pruned annually to achieve horticulturally correct shapes. Light pruning is scheduled for three occurrences each year.
7	Weed control in turf and bed areas will be achieved by using pre-emergent and post-emergent chemicals. All applicators will be licensed and approved by the State of Tennessee.
8	Insect control spraying is scheduled for three occurrences each year.
9	Leaf removal from shrub beds, turf and hardscapes is sscheduled for three times each year in October, November, and December.
10	All crew members will be uniformed at all times.
11	Re-mulching operation to include cleaning shrub beds and tree rings of weeds, applying pre-emergent weed control, fertilization, and 2"-3" of midnight mulch. This operation will be done one time per year
12	Over-seeding to be done in the fall using a quality fescue seed at a rate of 5# per 1000 square feet.
13	Irrigation start up and shut down
